

The **T**w**i**n **T**roller

- ✓ ***Silent running !***
- ✓ ***Accessible for (small) lakes which are just out of reach !***
- ✓ ***Equipped with 2x 36 lbs thrust electric engines***
- ✓ ***Foot pedal controls so you have both hands free for fishing !***

These are just some of the big advantages of the Twin Troller, equipped with an electric powered propulsion system, fully integrated in the hull. These are protected by aluminum and stainless steel construction whereby you can operate in as little as 15 cm of water. (6") You can even maneuver quietly and precisely over submerged tree logs without damaging the props. Or you can just run onto a sandy beach... The hands-free control system provides for independent control of the dual trolling motors while you are casting and fishing.

The Key word is *Friendly* :

- ***Friendly to the environment***
 - ***Friendly to your wallet***
 - ***CO2 Friendly***
 - ***Noise Friendly***
-
- **The hull is made of fully recyclable polyethylene resin. The resin is both lighter and much tougher than fiberglass.**
 - **2x 36 lbs thrust**
 - **It takes just minutes to understand the operation of this boat...**

- **Advantages**

Think of the ability to access every water you can think of... No ramp is required. Maneuver in the tightest spots or in very shallow waters...

Alone or with the help of a friend, just let the boat glide into the water...

Just right for those who can't afford or don't want to spend large sums of money on big boats... As this boat is much cheaper than similar (rowing) boats, and this one has engines ! You can easily move the boat on a small (boat) trailer or in the back of your pickup.

We also sell small boat trailers, specifically designed for these boats.

- **Foot Controls**

As mentioned earlier, the control and steering of the boat is done by foot. Press the toes downwards and the boat moves forward. To go backwards, just push your heels down. To steer, press just 1 foot. You will learn how to use the controls in minutes...

Stability

A picture says more than a thousands words...

- **Comfort**

There are two comfortable (rotating and foldable) chairs in the Twin Troller, which you can slide back and forth for the ultimate position, whether you are alone or with two. During transport, you can easily remove them.

Under the seats you will find enough space to store your boxes of lures, flies and other gear. The Twin Troller was designed with two extra deep equipment trays to keep gear and rods secure while out on the water. Also a measuring tool is molded-in to both compartments.
